

SpotLIGHT « flex »

Spotlight on the patient

Spotlighting is indispensable for any kind of procedure on the patient during an MRI examination. Especially for injections, focused lighting will considerably facilitate the procedure. Due to the die-cast housing, which is adjustable in all directions, the beam of light can be optimally directed at the patient.

The 230 V LED lamps were specifically tested for MR rooms. We would be happy to help you plan the optimal distribution of patient spotlights.

Please note that this lighting is designed solely for use on patients and is therefore not available in a dimmable version.

Features and your benefits

- MRI compatible LED spot lights
- Focused light for injections (4000 K)
- Flexible adjustable
- Energy saving
- Long service life of approx. 25 000 hours
- Therefore, less maintenance costs
- CE and RoHS certified
